General dust limit:

WEL-TWA: 10 mg/m³ (inhal. dust), 4 mg/m³ (respir. dust)

WEL-TWA = Workplace Exposure Limit - Long-term exposure limit (8-hour TWA (= time weighted average) reference period)

Citric acid	
Exposure route / Environmental compartment	Descriptor / Value / Unit
Environment - freshwater	PNEC 0,44 mg/l
Environment - marine	PNEC 0,044 mg/l
Environment - sewage treatment plant	PNEC 1000 mg/l

Ensure good ventilation. This can be achieved by local suction or general air extraction. If this is insufficient to maintain the concentration under the WEL or AGW values, suitable breathing protection should be worn. Applies only if maximum permissible exposure values are listed here. Not required in contained systems, as no exposure normally occurs here.

If operational exposure (e.g. repair or maintenance work) cannot be avoided, corresponding protective measures need to be taken.

8.2.2. Individual protection measures, such as personal protective equipment:

Wash hands before breaks and at end of work.

- 8.2.2.1. Eye/face protection:
Normally not necessary. With danger of contact with eyes. Tight fitting protective goggles with side protection (EN 166).

Hand protection: Normally not necessary.
Others: Usual protective working garments.
 - 8.2.2.3. Respiratory protection:
Normally not necessary.
If the general dust-limit is exceeded, breathing masks with fine-dust filters are necessary (EN 143), code colour white. If applicable, filter P 2 (EN 143), code colour white. Observe wearing time limitations for respiratory protection equipment.
 - 8.2.2.4. Thermal hazards:
